

»see inside to get insight«

Augmented Reality Software - medicalAR<sup>®</sup> Mirror

»We let you see into your body!«

The dream of looking through transparent skin to see one's organs and study their function is at least as old as medical science. Our mission is to make this dream come true.

*augmented mirror image  
of your major organs*

## medicalAR Mirror The Core Module

The Augmented Reality software **medicalAR Mirror** shows virtual objects as part of your body in a mirror-like setup.

Our main objective is to give you the impression of seeing through your semi-transparent clothes and skin to view the interior of the »system of the systems« - your body.

## medicalAR Apps Games & Applications

**medicalAR Mirror** is constantly extended by Apps that incorporate application oriented interaction- and visualization methods for different scenarios.

Beside the currently available Apps, we offer **Software Development Services** to customize **medicalAR Mirror** according to your concepts.
